Waiting Area Seating Collection

Waiting Seating

Excellence in Seating for Airport and Passenger Terminal Waiting Areas

Robustly-durable, aesthetically-pleasing, Leadcom waiting area seating meets the most stringent safety standards in the world – designed and developed for an exceptional user experience, lasting performance and serviceability.

User experience is central to waiting area seating solutions. Using a PRM system, our seating welcomes individuals with disability or limited mobility - supporting the contours of the body, with a clamp-lock design that ensures the seating is simple and quick to assemble. Each component is environmentally-sound and are fully-recyclable, with powder-coating adhering to ISO 14001:2004.

The **lasting performance** of our seating is why the largest, busiest of airports around the world choose Leadcom time and again. The aluminium we use meets the RoHS Standard; the PU Padding adheres to the ISO Skin Test Standard 10993, and the construction passes ANSI/BIFMA x5.4 2012 Lounge and Public Seating Tests.

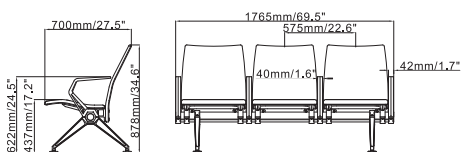

Ensuring **serviceability** is essential for traveller safety and low maintenance costs, for which we use a PU seat and back – a practical, fire-resistant and durable material certified by international Flammability Codes California Technical Bulletin 117-2013 section 3 and Table-2 –and California Proposition 65.

WAITING AREA SEATING
